PROFESSIONAL SUMMARY

Results-driven Computer Science student with a strong interest in Full Stack Development, experienced in building backend applications using Java while actively strengthening frontend skills. AWS-certified with practical exposure to Machine Learning projects as part of AI/ML specialization. Proven ability to apply technical knowledge in real-world scenarios through hackathons and project-based development.

EDUCATION

B.Tech, AI & Machine Learning, Saveetha Engineering College 2023 – 2027
CGPA: 8.31/10.0 (Expected)

HSC, Terapanth Jain Vidyalaya 2022 – 2023
87.66% | Gold Medal — Computer Science (100/100)

INTERNSHIP EXPERIENCE

Java Full-Stack Developer Intern (Virtual) – Infosys Springboard 02/2026 – Present
Project: Crypto Portfolio Management Platform

Tech Stack: Spring Boot, React, PostgreSQL, Binance API

- Developed 15+ REST APIs for trading, wallet management, and portfolio tracking using the Binance API, and implemented JWT authentication, OTP verification, and role-based access with Spring Security.
- Built a FIFO-based P&L engine to track 100+ test portfolios, ensuring accurate cost-basis calculations.
- Created a React dashboard with real-time charts, improving load time by ~20%, and designing risk alert and scam detection features for enhanced trading security.

TECHNICAL SKILLS

Languages Java, Python, C, SQL	Backend Spring Boot, Spring MVC, RESTful APIs, Microservices, JPA, Hibernate	Frontend React.js, HTML, CSS, JavaScript
Cloud & DevOps AWS (EC2, S3, IAM, Lambda), Docker, CI/CD	Databases MySQL, PostgreSQL	Other JUnit, Swagger, Agile, Scrum
Security Spring Security, JWT, Authentication, Authorization	Machine Learning PyTorch, Scikit-Learn, Numpy, Pandas.	

PROJECTS

Quiz Application, Spring Boot PostgreSQL REST API

- Built a 4-layer modular architecture (Entity, Controller, DTO, Service) with admin CRUD for 100+ MCQs.
- Increased assessment accuracy by 30% by implementing a randomised quiz engine with real-time scoring.
- The architecture supports timed quizzes, difficulty levels, and leaderboards with little refactoring; quiz logic is exposed via REST endpoints.

Alzheimer's Disease Prediction, Python TensorFlow Scikit-learn CNN

- Developed a CNN model using TensorFlow and Keras to classify Alzheimer's disease from MRI brain scans.
- Achieved 85%+ validation accuracy by using data preprocessing and image normalisation techniques to enhance model performance.
- Developed a prediction pipeline based on Python to categorise MRI scans into various cognitive stages, allowing for effective and automated disease detection.

CERTIFICATIONS

AWS Certified Cloud Practitioner	Coursera - Spring Boot Services	Coursera - Getting started with Git & GitHub	Coursera - Relational Databases
Simplilearn - Machine Learning	Coursera - HTML/CSS/JS	Coursera - OOPS IN JAVA	NPTEL - Cloud Computing

LEADERSHIP & COMMUNITY

Saveetha Engineering College, Instructor — Unlock Future with Cloud, College Event Day 02/2026 – 02/2026
Instructed 30+ students on AWS core services (EC2, S3, IAM, Lambda) and guided them toward the Cloud Practitioner certification while authoring and distributing a study guide to 40+ students across departments. Chennai, India

Cloud Club, Saveetha Engineering College, Member
Active Cloud Club member engaging in AWS-focused sessions and collaborating on cloud learning initiatives.

ACHIEVEMENTS

HackerRank 5-star badges in Java, Python & C.	Leetcode 50-day consecutive DSA problem-solving streak.
Kyndryl AI ASCEND Hackathon Finalist	IBM Datathon Participant
